CARE AND MAINTENANCE OF YOUR NEW SPARTAFLEX FLOOR COATING

Congratulations! You have just purchased a rugged SpartaFlex floor coating for your home or business. Your purchase is covered by one of the strongest floor coating warranties in the country!

Regular Cleaning: Maintaining your new SpartaFlex floor coating is very easy. A soft broom or dust mop will work well to keep your floor clean of dust, dirt or other foreign particles that may gather on it. You can also use a mop and a gentle cleaner when a more thorough cleaning is desired. The manufacturer of SpartaFlex prefers a bio-degradable floor cleaning product called “Simple Green” which is now available in a pleasant Lemon scent.

Tire Marks Or Heavier Cleaning: For removal of tire marks or when you want a more substantial cleaning, use a gentle cleaner or degreaser such as a ‘Bug & Tar Remover’ designed to remove stains from your car’s finish. Be sure to check the labels and avoid any harsh, abrasive cleaners such as Comet. While it is unlikely that gentle cleaners or degreasers will damage your SpartaFlex floor, it is always a good idea to try a small amount of the cleaner on a small area to make sure that it does not discolor or harm your new SpartaFlex floor.

Products That Will Damage Your SpartaFlex Floor: While SpartaFlex is resistant to most chemicals and compounds, there are 3 that you need to make sure are not spilled on your SpartaFlex floor:

- 1) Methyl-Ethyl-Ketone (MEK), Acetone or Zylene - sometimes are used as a solvent, paint thinner or cleaner. If they spill, do not rub, but blot dry and allow to evaporate.
- 2) Paint Thinner - is also not recommended to come in contact with your floor. Use same procedure outlined in #1.
- 3) Acid (such as Battery Acid, etc) – prolonged exposure to stronger concentrations of acid will damage any floor – ours included – and is not recommended.

For more information, please call us at 866-330-1DAY and ask to speak with Paul.
