## **Re: REPORT OF TEST RESULTS**

By: Indmar Chemicals, Manufacturer of SpartaFlex Coatings

Date: February 5, 2007

CHEMICALS

The tests performed were conducted in accordance with ASTM D 1308-02 Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes.

These tests were conducted on standardized steel panels at 75'F and 50% Relative Humidity. The HP Spartacote Coating system was applied in two coats at 6.0-7.0 dry film thickness.

Panels were allowed to age for 7 days prior to testing.

The tests consisted of placing the specified chemical directly on the panel, covering the chemical with a watch glass and allowing to remain on a horizontal panel for 24 hours prior to evaluation.
